PROFILE

Hello! I'm Mukesh Modi, a passionate Front-End Developer from Banaskantha. Currently, I'm pursuing my Front-End Development studies at Red & White Multimedia. I have a background in Arts (B.A.), and I've always been curious about how websites work, which led me to dive into the world of web development.

I specialize in React.js and also work with Redux Toolkit and Thunk for state management. I love creating responsive and user-friendly interfaces that deliver a great user experience.

I believe in continuous learning and am always eager to explore new technologies and frameworks to sharpen my skills.

PROJECT

Redux, Redux Toolkit, Thunk & CRUD Operations

- I have hands-on experience in managing complex application states using Redux and Redux Toolkit. I utilize Thunk middleware for handling asynchronous operations like API calls in a clean and structured manner.

- Implemented state management using createSlice() and configureStore() from Redux Toolkit to simplify and organize code.
- Used Thunk to fetch data from RESTful APIs and manage asynchronous logic effectively.
- Developed multiple CRUD functionalities (Create, Read, Update, Delete) with proper API integration using axios and Redux actions.
- Ensured data consistency and efficient UI updates using reducers and selectors.
- Followed best practices to maintain scalable and maintainable code.
